Atmospheric Chemistry

Ann M Holloway, Richard P Wayne

Atmospheric Chemistry Ann M Holloway, Richard P Wayne

Atmospheric Chemistry provides readers with a basic knowledge of the chemistry of Earth's atmosphere, and an understanding of the role that chemical transformations play in this vital part of our environment. The composition of the 'natural' atmosphere (troposphere, stratosphere and mesosphere) is described in terms of the physical and chemical cycles that govern the behaviour of the major and the many minor species present, and of the atmospheric lifetimes of those species. An extension of these ideas leads to a discussion of the impacts of Man's activities on the atmosphere, and to an understanding of some of the most important environmental issues of our time. One thread of the book explains how living organisms alter the composition and pressures in the atmosphere, modify temperatures, and change the intensity and wavelength-distribution of light arriving from the Sun. Meanwhile, the living organisms on Earth have depended on these very same environmental conditions being satisfactory for the maintenance and evolution of life. There thus appear to be two-way interactions between life and the atmosphere. Man, just one species of living organism, has developed an unfortunate ability to interfere with the feedbacks that seem to have maintained the atmosphere to be supportive of surface life for more than 3.5 billion years. This book will help chemists to understand the background to the problems that arise from such interference. The structure of the book and the development of the subject deviate somewhat from those usually encountered. Important and recurring concepts are presented in outline first, before more detailed discussions of the atmospheric behaviour of specific chemical species. Examples of such themes are the sources and sinks of trace gases, and their budgets and lifetimes. That is, the emphasis is initially on the principles of the subject, with the finer points emerging at later points in the book, sometimes in several successive chapters. In this way, some of the core material gets repeated exposure, but in new ways and in new contexts. The book is written at a level that makes it accessible to undergraduate chemists, and in a manner that should make it interesting to them. However, the material presented forms a solid base for those who are extending their studies to a higher level, and it will also provide non-specialists with the background to an understanding of Man's several and varied threats to the atmosphere. Well-informed citizens can then better assess measures proposed to prevent or alleviate the potential damage, and policy makers more realistically formulate the necessary controls on a sound scientific foundation.

From reader reviews:

Hallie Cathey:

In this age globalization it is important to someone to acquire information. The information will make professionals understand the condition of the world. The fitness of the world makes the information better to share. You can find a lot of personal references to get information example: internet, newspaper, book, and soon. You will observe that now, a lot of publisher that will print many kinds of book. Typically the book that recommended for you is Atmospheric Chemistry this book consist a lot of the information on the condition of this world now. This specific book was represented how do the world has grown up. The terminology styles that writer require to explain it is easy to understand. The actual writer made some study when he makes this book. That is why this book suited all of you.

Phillip Barker:

With this era which is the greater man or woman or who has ability to do something more are more precious than other. Do you want to become among it? It is just simple way to have that. What you must do is just spending your time almost no but quite enough to have a look at some books. Among the books in the top checklist in your reading list is Atmospheric Chemistry. This book and that is qualified as The Hungry Hillsides can get you closer in getting precious person. By looking right up and review this publication you can get many advantages.

Danny Johnson:

Do you like reading a reserve? Confuse to looking for your chosen book? Or your book had been rare? Why so many question for the book? But any people feel that they enjoy to get reading. Some people likes reading through, not only science book but also novel and Atmospheric Chemistry or maybe others sources were given know-how for you. After you know how the great a book, you feel wish to read more and more. Science guide was created for teacher or maybe students especially. Those books are helping them to put their knowledge. In various other case, beside science publication, any other book likes Atmospheric Chemistry to make your spare time a lot more colorful. Many types of book like this one.

Kathy Graves:

A lot of people said that they feel bored stiff when they reading a reserve. They are directly felt the item when they get a half areas of the book. You can choose typically the book Atmospheric Chemistry to make your reading is interesting. Your current skill of reading skill is developing when you similar to reading. Try to choose basic book to make you enjoy to see it and mingle the idea about book and reading through especially. It is to be first opinion for you to like to start a book and read it. Beside that the book Atmospheric Chemistry can to be your new friend when you're really feel alone and confuse with the information must you're doing of the time.
