Biomass to Renewable Energy Processes

Biomass to Renewable Energy Processes

Continuously increased consumption of fossil fuels, decreased availability of easily accessible fossil fuels, significant contributions to climate change and wildly fluctuating fuels prices have combine to challenge the reliability and sustainability of our current energy supply. A possible solution to this energy challenge, biomass energy production, heavily dependent on sugarcane and corn production, is vulnerable to the fluctuation of the feedstock price. New technologies need to be developed to convert abundant biomass such as lignocellulosic materials into energy products in a cost-effective and environmentally friendly manner.

An introduction to fundamental principles and practical applications, **Biomass to Renewable Energy Processes** explains the theories of biological processes, biomass materials and logistics, and conversion technologies for bioenergy products such as biogas, ethanol, butanol, biodiesel, and synthetic gases. The book discusses anaerobic digestion of waste materials for biogas and hydrogen production, bioethanol and biobutanol production from starch and cellulose, and biodiesel production from plant oils. It addresses thermal processes, including gasification and pyrolysis of agricultural residues and woody biomass. The text also covers pretreatment technologies, enzymatic reactions, fermentation, and microbiological metabolisms and pathways. It explores the engineering principles of biomass gasification and pyrolysis and potential end-products.

Editor Jay Cheng has assembled contributors from multiple engineering disciplines, reflecting the breadth and depth of the field. These experts discuss the fundamental principles of the processes for bioenergy production, supplying the background needed to understand and develop biofuel technologies. They provide the foundation for future work and development on what can be a clean, green, renewable, and sustainable energy source for years to come.

From reader reviews:

Colleen Key:

Hey guys, do you desire to find a new book to study? Maybe the book with the concept Biomass to Renewable Energy Processes suitable to you? The book was written by a well-known writer in this era. The book titled Biomass to Renewable Energy Processes is the main of several books in which everyone reads now. This particular book has inspired lots of people in the world. When you read this publication you will enter the new way of measuring that you never knew ahead of. The author explained their plan in a simple way, therefore all of people can easily comprehend the core of this reserve. This book will give you a lot of information about this world now. To help you to see the represented of the world within this book.

Julie Bell:

Reading can be called a head hangout, why? Because when you are reading a book specially a book entitled Biomass to Renewable Energy Processes your mind will drift away through every dimension, wandering in most aspects that maybe unidentified for but surely can be your mind friends. Imagining every word written in an e-book then become one type conclusion and explanation in which maybe you never get prior to. The Biomass to Renewable Energy Processes giving you a different experience more than blown away the mind but also giving you useful data for your better life on this era. So now let us present to you the relaxing pattern this is your body and mind will be pleased when you are finished looking at it, like winning an activity. Do you want to try this extraordinary investing spare time activity?

Margaret Morales:

Biomass to Renewable Energy Processes can be one of your beginning books that are good ideas. We recommend that straight away because this e-book has good vocabulary that can increase your knowledge in terminology, easy to understand, bit entertaining but still delivering the information. The copywriter giving his/her effort to set every word into a joy arrangement in writing Biomass to Renewable Energy Processes nevertheless doesn't forget the main level, giving the reader the hottest as well as based confirmed resource data that maybe you can be one among it. This great information can draw you into a brand-new stage of crucial considering.

Gloria Lentz:

As we know that book is a very important thing to add our expertise for everything. By a reserve we can know everything we want. A book is a group of written, printed, illustrated as well as blank sheets. Every year has been exactly added. This guide Biomass to Renewable Energy Processes was filled in relation to science. Spend your extra time to add your knowledge about your scientific disciplines competence. Some people have a different feel when they read some sort of book. If you know how big benefit of a book, you can experience joy to read a guide. In the modern era like right now, many ways to get a book that you simply wanted.
