Phytochemical Adaptations to Stress (Recent Advances in Phytochemistry) Barbara N. Timmermann, Cornelius Steelink, Frank A. Loewus

This volume is based on the proceedings of the Phytochemical Society of North America's 23rd Annual Meeting on "Phytochemical Adaptations to Stress" which was held at the University of Arizona, Tucson, July 5-8, 1983. It contains a series of articles which focus on our current knowledge on the production of secondary (natural) metabolites by higher plants in response to biological and physiological stresses. The editors of this volume are deeply indebted to a number of people and organizations for their support and contributions which were critical to the success of this scientific meeting. Generous grant support was provided by the Agricultural Research Service of the United States Department of Agriculture. Additional financial support came from the Phytochemical Society of North America. Indispensable services and personnel were donated by the Departments of Chemistry and Pharmaceutical Sciences, the College of Agriculture and the Office of Arid Lands Studies of the University of Arizona. Special recognition is due to Paul Mirocha of the Office of Arid Lands Studies for his drawing of the frontispiece and the superb photograph on the jacket. The Division of Conferences and Short Courses of the University of Arizona deserves credit for its pivotal role in maintaining a well-run and pleasant conference. Many other volunteers gave their time and energy to make the Symposium a success; we wish to mention two from the Department of Pharmaceutical Sciences, Brian Week and Catherine L. Buckner.
