**Old and New Aspects in Spectral Geometry (Mathematics and Its Applications)** M.-E. Craioveanu, Mircea Puta, Themistocles M. Rassias

It is known that to any Riemannian manifold  $(M, g)$ , with or without boundary, one can associate certain fundamental objects. Among them are the Laplace-Beltrami operator and the Hodge-de Rham operators, which are natural [that is, they commute with the isometries of  $(M, g)$ ], elliptic, self-adjoint second order differential operators acting on the space of real valued smooth functions on  $M$  and the spaces of smooth differential forms on  $M$ , respectively. If  $M$  is closed, the spectrum of each such operator is an infinite divergent sequence of real numbers, each eigenvalue being repeated according to its finite multiplicity. Spectral Geometry is concerned with the spectra of these operators, also the extent to which these spectra determine the geometry of  $(M, g)$  and the topology of  $M$ . This problem has been translated by several authors (most notably M. Kac) into the colloquial question "Can one hear the shape of a manifold?" because of its analogy with the wave equation. This terminology was inspired from earlier results of H. Weyl. It is known that the above spectra cannot completely determine either the geometry of  $(M, g)$  or the topology of  $M$ . For instance, there are examples of pairs of closed Riemannian manifolds with the same spectra corresponding to the Laplace-Beltrami operators, but which differ substantially in their geometry and which are even not homotopically equivalent.

### **From reader reviews:**

#### **Patricia Coburn:**

Why don't make it to be your habit? Right now, try to ready your time to do the important act, like looking for your favorite e-book and reading a e-book. Beside you can solve your condition; you can add your knowledge by the guide entitled Old and New Aspects in Spectral Geometry (Mathematics and Its Applications). Try to make book Old and New Aspects in Spectral Geometry (Mathematics and Its Applications) as your close friend. It means that it can to be your friend when you truly feel alone and beside regarding course make you smarter than previously. Yeah, it is very fortunated for yourself. The book makes you a lot more confidence because you can know everything by the book. So , let me make new experience in addition to knowledge with this book.

#### **Joy Carlson:**

Can you one of the book lovers? If yes, do you ever feeling doubt when you find yourself in the book store? Try to pick one book that you just dont know the inside because don't evaluate book by its deal with may doesn't work here is difficult job because you are scared that the inside maybe not since fantastic as in the outside appearance likes. Maybe you answer can be Old and New Aspects in Spectral Geometry (Mathematics and Its Applications) why because the excellent cover that make you consider about the content will not disappoint you. The inside or content is definitely fantastic as the outside or perhaps cover. Your reading 6th sense will directly assist you to pick up this book.

#### **Richard Diller:**

The book untitled Old and New Aspects in Spectral Geometry (Mathematics and Its Applications) contain a lot of information on it. The writer explains the girl idea with easy means. The language is very simple to implement all the people, so do not really worry, you can easy to read it. The book was compiled by famous author. The author will take you in the new age of literary works. It is easy to read this book because you can continue reading your smart phone, or program, so you can read the book with anywhere and anytime. If you want to buy the e-book, you can open up their official web-site and order it. Have a nice study.

#### **Mary Otter:**

That e-book can make you to feel relax. This book Old and New Aspects in Spectral Geometry (Mathematics and Its Applications) was colourful and of course has pictures on the website. As we know that book Old and New Aspects in Spectral Geometry (Mathematics and Its Applications) has many kinds or category. Start from kids until youngsters. For example Naruto or Detective Conan you can read and believe you are the character on there. So , not at all of book are usually make you bored, any it can make you feel happy, fun and chill out. Try to choose the best book for you and try to like reading in which.
