Reeds Maritime Meteorology (Reeds Professional) Maurice Cornish, Elaine Ives

Reeds Maritime Meteorology is written primarily for serving and trainee deck officers, those studying for certificates of competency in merchant ships and for fishermen. It provides descriptions of the elements and forces which contribute to maritime meteorology and the principles which govern them, and deals specifically with:

weather forecasting at sea and the use of fax, navtex and satellite technology
ocean currents and swell
tropical revolving storms
the development and distribution of sea ice
weather routing
passage planning
the management and care of cargo in heavy weather

There is an extensive glossary, revision questions at the end of each chapter, and a fold-out chart of ocean currents as well as numerous explanatory photos and diagrams. For this revised edition, the content and website addresses have been updated.

'Commended to anyone who requires a clear and authoritative introduction to the subject' *Marine Engineers Review*

'A splendid volume...a comprehensive and serious weather book' *The Seafarer*
