Green By Design: Creating a Home for Sustainable Living

Angela M. Dean

Green By Design: Creating a Home for Sustainable Living Angela M. Dean

There is no "one-size-fits-all" plan for so-called "green" homes; rather, there are universal principles of design that can be applied to individual tastes and needs. Architect Angela Dean offers a variety of ways to incorporate green building into your home, including using healthy building materials such as straw bales and natural flooring, taking advantage of local materials and resources, reusing gray water for landscaping, and incorporating passive solar design. Her goal is to teach people how to think about building sustainable homes. Green by Design provides a thorough analysis of what it means to build green and offers advice on what to consider when designing a sustainable home. Green by Design features full-color photographs and line drawings of floor plans show different examples of successful sustainable homes. It also includes in-depth case studies of more than a dozen homes so readers planning a green home can see what worked for others. By providing people with knowledge, inspiration, and the ability to ask the right questions (and understand the answers) Green by Design puts home builders and owners on a path to creating beautiful, environmentally responsible homes that they can be proud to live in. Angela Dean, AIA, is principal architect of AMD Architecture in Salt Lake City. She specializes in environmentally responsible designs to create healthy, comfortable buildings that are in harmony with the environment
