Statistics for Advanced Practice Nurses and Health Professionals Manfred, PhD Stommel, Katherine J., PhD, FNP-BC Dontje

This comprehensive, graduate-level text for advanced practice nurses and other health care professionals provides state-of-the-art tools that facilitate the reading and interpretation of clinical research articles that use increasingly complex statistical techniques. It addresses clinically relevant topics in biostatistics beyond the usual introduction to linear models, such as survival analysis and evaluation of screening tests. The text emphasizes the importance of understanding the underlying logic of statistical inference and statistical models to support correct interpretation and effective translation into practice. It promotes appropriate statistical method selection for conducting translational research.

With a focus on disseminating information in easily understandable language, the text addresses basic statistical reasoning and four different classes of statistical models. The appendix provides refreshers on the algebraic underpinnings of statistics. More complex algebraic derivations are highlighted in boxes throughout the text chapters. The text explains how to work with the exponential expressions and logarithms necessary for the interpretation of logistic and hazard regression models and features clear explanations of more sophisticated statistical models, inference, and analyses. Chapters include examples from current research and multiple exercises designed to reinforce learning.

Key Features:

- End-of-chapter exercises include both problems of interpretation and numerical problems that can be solved via hand calculations.
- For instructors and students interested in practical data analysis, data sets and practice problems are available from Springer Publishing Company's website with instructions in SPSS, STATA, and SAS formats.
- At the end of each chapter is a "Literature Application" text box with interpretation questions about a recent research article that highlights the statistical model discussed in the chapter.
- Throughout the book, text boxes highlight the most important algebraic formulas useful in interpreting statistical methods.
- A chapter on data management practices and ethical issues of privacy maintenance is included.
- Nine appendices provide tables of major probability distributions, for example, normal, t- and F-distributions, and algebraic derivations of some of the most important results in statistics.

From reader reviews:

Robert Russo:

What do you about book? It is not important to you? Or just adding material when you want something to explain what the ones you have problem? How about your spare time? Or are you busy person? If you don't have spare time to perform others business, it is gives you the sense of being bored faster. And you have extra time? What did you do? Every individual has many questions above. The doctor has to answer that question because just their can do which. It said that about reserve. Book is familiar on every person. Yes, it is right. Because start from on kindergarten until university need this kind of Statistics for Advanced Practice Nurses and Health Professionals to read.

Penny Laughlin:

The actual book Statistics for Advanced Practice Nurses and Health Professionals has a lot info on it. So when you make sure to read this book you can get a lot of benefit. The book was published by the very famous author. Tom makes some research ahead of write this book. This specific book very easy to read you can obtain the point easily after reading this book.

Ryan Fox:

Do you like reading a publication? Confuse to looking for your chosen book? Or your book seemed to be rare? Why so many question for the book? But almost any people feel that they enjoy with regard to reading. Some people likes reading through, not only science book but also novel and Statistics for Advanced Practice Nurses and Health Professionals or maybe others sources were given know-how for you. After you know how the truly great a book, you feel desire to read more and more. Science publication was created for teacher or maybe students especially. Those books are helping them to increase their knowledge. In additional case, beside science e-book, any other book likes Statistics for Advanced Practice Nurses and Health Professionals to make your spare time a lot more colorful. Many types of book like here.

James Floyd:

Publication is one of source of understanding. We can add our understanding from it. Not only for students but additionally native or citizen require book to know the revise information of year to be able to year. As we know those books have many advantages. Beside we add our knowledge, may also bring us to around the world. By the book Statistics for Advanced Practice Nurses and Health Professionals we can acquire more advantage. Don't you to definitely be creative people? To become creative person must like to read a book. Simply choose the best book that acceptable with your aim. Don't be doubt to change your life at this time book Statistics for Advanced Practice Nurses and Health Professionals. You can more appealing than now.
